

Enlaps launches *Planet Watch* by Enlaps on the occasion of the IYGP International Year of Glacier Preservation

Grenoble, March 21, 2025 – Enlaps, a Grenoble-based startup specializing in long-term project monitoring, announces the launch of *Planet Watch by Enlaps*. This ambitious initiative aims to support the scientific community and raise public awareness about the impacts of climate change on glaciers. Enlaps is committed to dedicating 1% of its Tikee timelapse camera sales volume to environmental monitoring.

A technology serving glaciers, acclaimed by scientists

Adopted by many glaciologists, the *Tikee* solution combines a 100% autonomous camera (solar-powered, 4G-connected, GPS-equipped, and resistant to extreme conditions) with the *myTikee* cloud platform. This platform generates high-quality content and provides essential data for analyzing climatic phenomena affecting glacier melt.

Thanks to this ecosystem, scientists can precisely document glacier changes in various locations worldwide, including **Santa Isabel in Colombia, Fellaria in Italy, Bossons glacier in France, Heinabergjökull in Iceland**, and many more.

40 projects per year to better understand climate change

Since COP26, Enlaps has been involved in several glacier monitoring projects. With *Planet Watch by Enlaps*, the ambition is even greater: **10 projects will be selected each quarter**, totaling **40 projects per year**, to enhance knowledge about climate impacts on key locations worldwide.

A **jury of experts**, including leading figures known for their commitment to climate action – such as Antoine Auberton-Hervé (CEO of Enlaps), Dr. Heidi Sevestre (Glaciologist, speaker, author), and Prof. Dr. Michael Zemp, Director of WGMS (World Glacier Monitoring Service) – will select projects based on scientific and technical criteria.

« Facing climate change and on the occasion of the IYGP International Year of Glaciers, it seemed important to propose an initiative aligned with our values and commitment to the environment. With Planet Watch, we are offering our technology at the service of science and glacier preservation. »

– **Antoine Auberton-Hervé, CEO of Enlaps**

Applications are open until June 6, 2025, on the official Planet Watch by Enlaps website.

About Planet Watch by Enlaps

Aware of environmental challenges and their impact, Enlaps created the **Planet Watch by Enlaps** initiative to provide the scientific community with its Tikee solution. This initiative allows researchers worldwide to track and assess climate change impacts using cameras strategically positioned on emblematic glaciers. The collected data will be essential for documenting climate evolution and raising public awareness about the urgency of action.
